Portfolio: fashola-portfolio.vercel.app | GitHub: github.com/fasholatolulope3 | LinkedIn: linkedin.com/in/fashola-tolulope

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with approximately three years of software development experience across personal projects, paid development work, freelance engagements and contract engineering. Builds web and mobile applications with TypeScript, JavaScript, Node.js, Express, PHP/Laravel, React, Next.js and React Native, backed by PostgreSQL, MongoDB and MySQL. Contributed to a fintech payments platform and a multi-role delivery marketplace, delivering REST APIs, Paystack payment and payout workflows, webhook verification, KYC-related workflows, JWT authentication, role-based access control and real-time features with Socket.IO. Holds a BSc Ed. in Computer Science Education (Al-Hikmah University) and the IBM DevOps and Software Engineering Professional Certificate.

TECHNICAL SKILLS

Programming Languages: TypeScript, JavaScript, PHP, SQL, HTML5, CSS3; Python (foundational, via IBM coursework)

Backend Development: Node.js, Express.js, Laravel, REST API design and development, JWT authentication, Role-Based Access Control (RBAC), server-side validation, webhook handling and verification, Socket.IO

Frontend Development: React, Next.js, Vue.js, Inertia.js, Tailwind CSS, shadcn/ui, Bootstrap, TanStack Query, Zustand

Mobile Development: React Native, Expo, Expo EAS

Databases and Data Access: PostgreSQL, MongoDB, MySQL, Prisma ORM, Mongoose, relational and document database design

API Integrations and Services: Paystack (payments, payouts, bulk disbursement), Twilio OTP, KYC workflows, Cloudinary, UploadThing, Multer

Testing and QA: Postman API testing, manual functional testing, debugging, PHPUnit (foundational)

DevOps, Cloud and Deployment: Vercel, Railway, Expo EAS builds. Foundational (IBM coursework): Docker, Kubernetes, OpenShift, CI/CD, microservices, serverless architecture, Linux and shell scripting, monitoring and observability, Flask

Development Tools: Git, GitHub, npm, Composer, Postman

AI-Assisted Development: ChatGPT, Claude, Gemini

Professional Practices: Agile and Scrum practices, technical documentation, project reporting, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Full-Stack Software Engineer (Contract)

March 2026 – September 2026

Vemre Enterprise Ltd — IT Department | Nigeria

- Contributed to the development and maintenance of Vemre's freelancer payments and remittance platform, a product that reached over 1,000 users within three months and processed more than $50,000 in international payments during the reported period.
- Developed backend features and REST API integrations with Node.js, Express, TypeScript and MongoDB, implementing the business logic behind payment and account-management workflows.
- Implemented and maintained Paystack payout workflows and bulk disbursement functionality, enabling the platform to move freelancer earnings to Nigerian bank accounts.
- Built KYC verification and compliance-related functionality supporting identity review, account administration and risk-control processes.
- Connected backend services to web and mobile applications, supporting both customer-facing and administrative features.
- Prepared project reports for management covering implementation progress, milestones, delivery risks and project status.

Full-Stack Software Engineer

2025 – Present

Independent / Freelance | Nigeria | Remote and On-site

- Delivered web and mobile application features against client requirements, working across backend services, databases, user interfaces and deployment.
- Built REST APIs and backend business logic with Node.js, Express, TypeScript, PHP and Laravel to support client application workflows.

- Implemented data-access layers and database operations using PostgreSQL with Prisma, MongoDB with Mongoose, and MySQL.
- Developed responsive web interfaces and cross-platform mobile applications with React, Next.js, React Native, Expo and Vue.js.
- Implemented authentication, role-based authorization and server-side validation to control access and protect application behavior.
- Integrated payment gateways, OTP authentication services and file-storage providers, including webhook verification where applicable.

Technical Support Lead / Technical Coordinator August 2024

AI Training Workshops — Academic Conferences | Nigeria

- Prepared and validated technical environments for AI training workshops, live demonstrations and hybrid conference sessions so facilitators could deliver content and participants could access it.
- Served as Technical Support Lead for the 10th SSTE Hybrid International Conference at the Federal University of Technology, Minna, supporting presentation delivery and virtual participation.
- Served as Technical Coordinator for the 6th International Conference on Innovation at Al-Hikmah University, coordinating the technical requirements of workshops on artificial intelligence and technology integration.
- Supported training activities reported to have reached more than 60 learners across the workshops.

SELECTED PROJECTS

Vemre — Freelancer Payments and Remittance Platform | *Contract project, team environment*

Technologies: TypeScript, Node.js, Express, MongoDB, Mongoose, Next.js, React, React Native, Expo, Paystack, Cloudinary, TanStack Query, Vercel

Repository: https://github.com/vemregit

Fintech platform that lets freelancers receive payments and withdraw to Nigerian bank accounts, with KYC verification, membership tiers and administrative compliance workflows.

- Developed backend API functionality with Node.js, Express, TypeScript, MongoDB and JWT authentication to support payment and account-management workflows.
- Integrated Paystack payment and bulk disbursement functionality, including a special-rate payout track with custom fee and holding-period rules.
- Contributed to a React Native and Expo mobile application covering invoice creation, KYC document capture and account management.
- Developed Next.js dashboard features for invoices, transaction ledgers, withdrawals, referrals and rolling-reserve information.
- Implemented administrative functionality for role-based access control, KYC review, account suspension and appeals, revenue analytics and bulk payout operations.
- Implemented compliance-related business rules covering rolling reserves, KYC-gated suspension, appeal windows, referral bonuses and promotional codes.

ErrandSort — On-Demand Delivery and Services Marketplace | *Shared backend serving five web and mobile clients*

Technologies: TypeScript, Node.js, Express, PostgreSQL, Prisma, Next.js, React Native, Expo, Socket.IO, Zustand, Paystack, Twilio, UploadThing, Railway

Multi-role delivery and services marketplace in which customers, vendors, drivers and administrators are served by one shared backend.

- Developed backend services with Express, TypeScript, PostgreSQL and Prisma, exposing a single shared API for customer, vendor, driver and administrator workflows across five dedicated clients.
- Implemented JWT authentication and role-based access control to separate permissions across the four user roles.
- Integrated Socket.IO to deliver real-time order tracking and in-app chat on web and mobile clients.
- Integrated Paystack payments with webhook verification, Twilio OTP authentication and file-upload services.
- Built administrative tooling for managing vendors, drivers, orders, bookings, disputes, campaigns, logistics and payouts.
- Deployed the backend to Railway and managed application state across client applications.

Loan Management System | *Paid project*

Technologies: Laravel, Vue.js, MySQL

- Developed a paid loan management application covering loan applications, approval workflows and repayment tracking.
- Implemented role-based workflows for administrators, field officers and borrowers, aligning system access with each role's operational responsibilities.

School Management System | *Early personal project*

Technologies: Laravel, MySQL, Bootstrap

- Built an early software development project that manages student records, attendance, grading and school administrative operations.
- Applied web development and relational database skills to centralize school information in a single application.

Secure Electronic Voting Platform | *Project*

Technologies: Laravel, Tailwind CSS, payment integration

- Developed an electronic voting application featuring payment integration and real-time result viewing.

Analytics Dashboard | *Project*

Technologies: Vue.js, Laravel, REST APIs

- Built an analytics dashboard that consumes REST API data and presents it through interactive charts and reporting views.

HACKATHONS AND ACHIEVEMENTS

Kwacee — Tourism and Local Discovery Website October 2026

Software Engineer | Team Project

Achievement: Second Place, 48-Hour Hackathon | Ilorin Innovation Hub, Ilorin, Kwara State

- Collaborated with a cross-functional team to build a responsive tourism discovery website that helps users explore attractions, cultural sites, local food spots and lesser-known destinations across Kwara State.
- Contributed to frontend development with React, HTML and CSS, and to backend development and data management with TypeScript, Node.js and MySQL.
- Helped turn local tourism discovery challenges into a working web solution within 48 hours, earning second place with the team.

EDUCATION

BSc Ed. Computer Science Education 2022 – 2025

Al-Hikmah University | Ilorin, Nigeria

Relevant areas of study: programming, data structures and software development.

CERTIFICATIONS AND PROFESSIONAL DEVELOPMENT

IBM DevOps and Software Engineering Professional Certificate 2026

IBM via Coursera

Coursework: software engineering, Agile and Scrum, Git and GitHub, CI/CD, testing and behavior-driven development, application security, cloud computing, Docker, Kubernetes, OpenShift, microservices, serverless applications, Linux and shell scripting, Python and Flask.
